P1 (Kapil)	"I have been using Tecno brand phone for last 10 years."	"I use WhatsApp for online mode & InShare for offline mode"	"For any file, I use WhatsApp."	NA	"WhatsApp is only medim used by my all friends."	"I don't have any concern with respect to security."	"I don't know anything with respect to privacy."	"I use WhatsApp only."	NA	NA	
P2 (Abhishek)	"If it's personal file sharing, like between, sharing between my devices, my phone, my iPad, my laptop. Airdrop is a nice thing which Apple does right"	"Interestingly, it was for the wedding photographs and all. We had to buy actually a new hard drive for it." "The bandwidth wasn't unlimited, right? You had to pay for every byte. There it, then we used, everybody in college used to use something called a share it. I mean, everybody had an Android phone. So mostly everybody had the ShareIt app on their phone. So we just used to use ShareIt. "	"On a personal level, usually it's mostly WhatsApp for small files. And these days, there are bigger files, like, imagine if I was on a trip with my friends, right? I need to share photos and videos. What we do generally is create a new email with a common google drive and then share that email and password for that google drive with everyone. And everybody dumps their material there so that it's there forever for everyone. "	"So it's, there's a hierarchy which you maintain in your head that comes out in the way you create your folders. There's always, there would always be hierarchy for everyone."	"If I have to share it with a couple of my friends, Google Drive is the best way to do because everybody has a Google account today."	"Like, yeah, in tech, I mean, there's something like vault, right, to secure your applications. So in, if in our app, there's a vault section, wherever I drag and drop a file to that vault, that vault cannot be opened without my explicit password which I have set for, set for that vault. "	"I don't want to share my personal mobile number with that guy who is sitting in the shop. So I do have, I have an email there, which I just use for this kind of purposes where I'll just upload that file to my email and then I'll send that to his, his email. so that he can just download it and print it out for me."	"If it's a sensitive thing, but a very small thing, I'll share it on WhatsApp. And I'll delete it from my side and ask them to delete it once they use it, right? If it is a big thing, then I'll put it in my drive. And I'll share the drive with them."	"Going out with friends, sharing pictures, which we clicked. Quality gets degraded in WhatsApp. But there are very Instagram savy people who want the raw photo, So I prefer Google drive for it."	"In Apple, you can do a family storage. So, I mean, let's say your household of three to five people, you pay 75 rupees a month and everybody can use that drive space, but it's still, so in software now it's called tenancy. You're maintaining your tenants. Right. One person, second person, third person, all these are tenants. So their data is segregated, but the place where it gets stored is big. So there's a tenancy maintained, but you can still, it's private for even the members. If that thing could be done in YouTube, I mean, not YouTube, Drive, Google Drive, it's great.	
P3 (Riya)	"I don't transfer files between any of my devices."	"I used Airdrop for non-internet mode & generally prefer WhatsApp if internet is available."	"For ease of access and the quality, probably Google Drive, because WhatsApp will, maybe not, I mean, it will not be good in terms of quality if I'm sending the picture through WhatsApp."	"So what we keep in mind is normally there is a certain size limit that you can't exceed in Gmail. So that is where you probably upload on the drive and then send it across. Otherwise, we just attach and then send it across email."	"WhatsApp is very convenient one because everybody has it and like it's easy to just, I would say ease of access is one of the reason and second, it's the most heard of platform like I haven't heard of other platforms as much as WhatsApp."	"It's just phone password in terms of security to count on."	"If I have to send something, some location or something to a delivery executive, automatically he gets my number."	"In case of office, it must be on google drive or gmail and personally, WhatsApp or any other social media platform. "	"If it's like in a proper event or something that we clicked photographs, then I would want it to go in good original quality."	"Due to internet connectivity a lot of times, otherwise not really.If the Wi Fi is not working, I switch to internet, like data. If that's also not working, maybe I just restart my phone. "	
P4 (Kadimibini)	1 smartphone 1iPad 1Tablet	"I am always connected to the Internet. I am preparing for UPSC, so I have all my classes Online."	"Sometimes, while sharing answer sheets with my trainer, the documents end up being 200pages. Which is around 150MB"	"Every week, I have an exam and I share my answers using Google Cloud. While doing that, I need to organize my answers really well."	"I share Photos in WhatsApp Group, with friends and family."	"I sent really important documents through WhatsApp. And if it things like Aadhaar Card, I call and verify if receiver has recieved it. Also, I don't share important documents with unknown people."	"There is nothing much I can do with security and Privacy. I don't send sensitive content over to anyone. All my major file sharing is answers and books. All of which is available online."	"I mostly have to share answers ungently. And if I need anything from my mentors, I directly call them and tehy send over the necessary documents through Telegram"	"Quality of files, specially documents, is very important to me. As I am preparing for UPSC, I generally share study materials and I need good quality images and uncompressed Documents to read through"	"I just call the reciever, whom I have sent something mistakenly and just inform them that it is not for them. That's it"	https://docs.google.com/document/d/1geOj8wH2aZHJ1FI0YmLIGGOqzif-vQ0QE_MyT4s4xwI/edit
P5(Garima)	1 smartphone, 1laptop	"I think I shared a file with limited internet access many times in this college. Because we don't really have frequent internet connection here".	"So what I prefer is, I make a PDF I click pictures, I scan it, I make a PDF out of it, and then I send it. Most probably on WhatsApp because you know what, WhatsApp is the most frequent app used by everyone, no matter what the age group is. "	"If I need to First of all, I won't just click pictures and send it to whatsapp because it's very troublesome to go through the, you know, the flow of the pictures. Like, which one was the first page, which one was the last page. Because, on whatsapp what happens is, whichever picture gets like loaded first, it just goes. It does not see like which one I clicked first and which one I clicked last. So what I prefer is, I make a PDF I click pictures, I scan it, I make a PDF out of it, and then I send it. "	"Mostly we send everything on WhatsApp. Yeah, we don't really use any other application. Mostly WhatsApp or mail or nearby share, like these are the three main applications or the sources that we use. And secondly, We always prefer document file or PDF. Like even if there is this excel file that I'm making, I'll convert it to PDF or document."	" The credibility of the source, by that I mean that first of all, there are many websites which are not secure and if you are downloading something from that, it can bring viruses or something. Like the Trojan Horse virus is something that is mostly like, it is brought in the mobiles when you download apps, which are not credible in source. "	"So mainly I got to know this method like recently, I did not know it, and you can see it in a Google file. Like, you know what a Google Drive file in which what happens like what torts teacher did was he just Downloaded all the files like all the cases in one folder of Google Drive and he shared it with people and now what? the most important and fascinating thing was whenever you open that folder only with the Email ID of college. You can access it. Otherwise, you can't access it. So it is only accessible for the limited number of people he has given access to. Not everyone. That was interesting. "	" The recent project which was to be submitted ungently. There was no internet connection, like no proper internet connection. I could not send it. So I told him on Whatsapp that I am not able to send it to you, he's like then send it on, uh, on Whatsapp, if it's possible. And I'm like on Whatsapp it will take more time, I'll prefer sending on email. And he's like okay fine. Then send it on email. Then I had, I had a very hard time connecting with my LAN and stuff.	"I just told you. WhatsApp only. So in case of 50 pages, will make a PDF. And in case of one page, will not. . But you know, right, the quality of the things become bad on WhatsApp, that's why people sometimes prefer telegram while sending pictures and all."	"Actually, even the LAN was working, but I don't know, because there were so many people who, at that point of, at 9 o'clock especially, there were so many people who come after, you know what, after their classes and stuff. And They all start using LAN, so there is this very heavy burden on this, you know what, LAN system of a college. And the internet speed from 343 something it goes to 50. So, uh, there is this fluctuation going on at that time, that's why it takes a lot of time to adapt. And because of that, none of the files can be sent while you are on LAN or any other, uh, this college network. So we need to use, especially only at 9 to 10 wala time pe.
